Sony Corporation provides no warranty with regard to this manual, the software, or other information contained herein and hereby expressly disclaims any implied warranties or merchantability or fitness for any particular purpose with regard to this manual, the software or such other information. In no event shall Sony Corporation be liable for any incidental, consequential, or special damages, whether based on tort, contract, or otherwise, arising out of or in connection with this manual, the software, or other information contained herein or the use thereof.

Macrovision: This product incorporates copyright protection technology that is protected by U.S. patents and other intellectual property rights. Use of this copyright protection technology must be authorized by Macrovision, and is intended for home and other limited viewing uses only unless otherwise authorized by Macrovision. Reverse engineering or disassembly is prohibited.

In the manual, the TM or ® marks are not specified.

Sony Corporation reserves the right to make any modification to this manual or the information contained herein at any time without notice. The software described herein is governed by the terms of a separate user licence agreement.

Please note that the illustrations in this manual may not necessarily apply to your model. Please see the Specifications sheet for the specific configuration of your VAIO.

ENERGY STAR

As an ENERGY STAR Partner, Sony has determined that this product meets the ENERGY STAR guidelines for energy efficiency.

The International ENERGY STAR Office Equipment Program is an international program that promotes energy saving through the use of computers and their office equipment. The program backs the development and dissemination of products with functions that effectively reduce energy consumption. It is an open system in which business proprietors can participate voluntarily. The targeted products are office equipment such as computers, displays, printers, facsimiles and copiers. Their standards and logos are uniform among participating nations.

ENERGY STAR is a U.S. registered mark.

Owner's record

The serial number, model number and product key are located on the bottom of your Sony computer. Record the numbers and refer to them if you call VAIO-Link. See also the printed **Specifications** document.

Safety Information

General

- ❑ Opening the unit, for whatever reason, could lead to damages that are not covered by the guarantee.
- ❑ To avoid electrical shock, do not open the cabinet. Refer servicing to qualified personnel only.
- ❑ To prevent fire or shock hazard, do not expose your VAIO computer to rain or moisture.
- ❑ If reporting a gas leak, do not use the modem or a telephone in the vicinity of the leak.
- ❑ Avoid using the modem during a severe electrical storm.
- ❑ To change the backup battery, please contact your nearest Sony Service Centre.
- ❑ Before you connect peripherals, turn off the computer and all peripherals.
- ❑ Connect the power cord only after connecting all cables.
- ❑ Turn on the computer only after turning off all peripherals.
- ❑ Do not move your computer while the system is in **Standby** mode.
- ❑ The magnetic properties of some objects can have serious consequences for your hard disk drive. They can erase the data on the hard disk drive and cause the computer to malfunction. Do not place your computer near or on any objects which emit magnetic fields, mainly:
 - ❑ TV sets
 - ❑ Speakers
 - ❑ Magnets and magnetic bracelets.

Audio/video

- ❑ Audio and picture distortion may occur if this equipment is positioned in close proximity to any equipment emitting electromagnetic radiation.

Connectivity

- Never install modem or telephone wiring during a severe lightning storm.
- Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.
- Take care when installing or modifying telephone lines.
- Use your computer only with the supplied AC adapter. To disconnect your computer completely from mains voltage, unplug the AC adapter.
- Make sure that the socket outlet is easily accessible.
- Never touch uninsulated telephone wire or terminals unless the telephone line has been disconnected at the network interface.

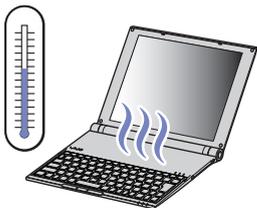

Caution

Your computer is a high-precision machine with unique characters. Although it is manufactured to withstand a lot of various stress factors, great care must also be taken in how it is handled and operated.

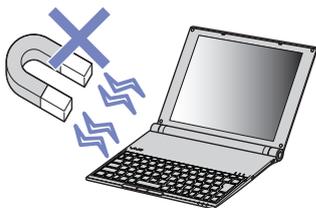

- ❑ **High temperature:** The upper panel may become hot during operations. This computer has a special way of releasing heat from the surface of the computer. The panel on the top part of the keyboard may become hot when the CPU is in heavy load stage. This is not a failure.
Be careful! Please do not touch the panel for a certain period of time as it can cause burning.

Please try to cool it down by proceeding as follows:

- 1 Change the settings of **System Thermal Control** from **Performance** to **Low Temperature** on the **VAIO Power Management** tab of **Power Options Properties**. Note: By default, **System Thermal Control** is set to **Low Temperature**. If you need to lower the temperature further, change the setting of **CPU Control** to **Battery Life** on the **VAIO Power Management** tab of **Power Options Properties**.
- 2 Disconnect all USB peripherals.
- 3 Disconnect the Wireless LAN PC Card or any other PC Card.
- 4 Set your computer to **Standby/Hibernate** mode when you are not using your computer.

- ❑ **Magnetic sensitivity:** Do not expose the computer to any magnetic sources. The data recorded on the hard disk may be lost or the computer may breakdown.

- ❑ **Weight:** Do not place any heavy objects on the computer. A heavy weight may deform the internal parts which may lead to a breakdown.

About additional software and screen savers

Your VAIO is equipped with one of the world's most compact high-performance processors. Its size makes it sensitive to the high consumption demanded by applications such as screen savers. Please be aware therefore, that installing additional software, such as screen savers that demand high consumption of the CPU, may reduce performance and life of the CPU.

Your VAIO is delivered without an active screen saver.

Regulatory information

Sony hereby declares that this product is in compliance with the essential requirements and other relevant provisions of European Directive 1999/5/EC (radio equipment and telecommunications terminal equipment Directive).

Declaration of Conformity

The European Union is targeting the free movement of goods for the internal market and to prevent technical barriers to trade. This effort has resulted in several EU Directives asking that manufacturers make their products comply with essential standards. Manufacturers are required to affix the "CE" mark on the products they sell and to draw up a "Declaration of Conformity" (DoC).

Primarily, the Declarations of Conformity are intended for the market surveillance authorities as proof that products satisfy the required standards. Additionally, Sony provides these EU DoC's on the website <http://www.compliance.sony.de> as a service to our customers.

You can search for all Declarations of Conformity available for a specific product by typing in the model name in the search box above. A list of matching documents will be displayed and can be downloaded. Please note that the availability of declarations depends on the scope of the EU Directives and the individual product specifications.

In case your model is equipped with Wireless LAN, please read the **Wireless LAN Regulations** leaflet before activating the Wireless LAN functionality.

Depending on the country, usage of the **Wireless LAN** functionality may be restricted. For country-specific details, please refer to the **Wireless LAN Regulations** leaflet. The Wireless LAN PC functionality which is incorporated into this unit has passed Wi-Fi certification, and complies with the interoperability specifications established by WECA (Wireless Ethernet Compatibility Alliance).

Disposing of lithium ion batteries

- ❑ Do not handle damaged or leaking lithium ion batteries. Dispose of promptly and properly at end-of-life.
- ❑ Danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.
- ❑ The battery pack used in this device may present a fire or chemical burn hazard if mistreated. Do not disassemble, heat above 60°C (140°F) or incinerate.
- ❑ Dispose of used batteries promptly and properly.
- ❑ Keep away from children.
- ❑ In some areas the disposal of lithium ion batteries in household or business waste may be prohibited.
- ❑ Use the public collection system.

Disposing of internal memory backup battery

- ❑ Your computer is equipped with an internal memory backup battery that should not have to be replaced during the lifetime of the product. For changing this battery, please contact VAIO-Link.
- ❑ Danger of explosion if the battery is incorrectly replaced.
- ❑ Dispose of properly at end-of-life.
- ❑ In some areas the disposal of lithium ion and other non-hazardous batteries in household or business waste may be prohibited.
- ❑ Please use the public collection system.

Welcome

Congratulations on purchasing a Sony VAIO computer. Sony has combined leading-edge technology in audio, video, computing and communications to provide you with state-of-the-art personal computing.

Here are the main features you can enjoy:

- ❑ **Exceptional performance.**
- ❑ **Portability** - The rechargeable battery pack provides hours of use without AC power.
- ❑ **Sony audio and video quality** - A high-resolution LCD screen enables you to take advantage of today's advanced multimedia applications, games, and entertainment software.
- ❑ **Multimedia features** – Enjoy audio and video CDs/DVDs.
- ❑ **Interconnectivity** – Your computer has Ethernet, USB 2.0 (High-speed/Full-speed/Low-speed) and i.LINK functionalities. i.LINK is a bidirectional digital interface for exchanging data. With the Multicard adapter (5 in 1) you can easily exchange and share digital data with compatible products.
- ❑ **Wireless technology** – Thanks to the Wireless LAN (IEEE 802.11b/g) technology, you can communicate freely, without cables or wires.
- ❑ **Windows** - Your system includes Microsoft's Windows XP Professional with Service Pack 1a operating system.
- ❑ **Communications** - Access popular online services, send and receive e-mails, browse the Internet.
- ❑ **Excellent customer support** - If you are experiencing any problems with your computer, please check the VAIO-Link website for a possible solution: <http://www.vaio-link.com>
Before contacting VAIO-Link, please try to solve the problem by reading this guide, your printed **Guide to Troubleshooting and Recovering your VAIO System**, or the manuals and help files for the peripherals or software.

Documentation pack

Your Documentation Pack contains printed information and user guides to read on your computer.

The user guides can be found on your desktop through the **My Info Centre** icon  My Info Centre .

From **My Info Centre**, click the **My Documentation**  icon to see the guides.

Printed documentation

- A **Getting Started** brochure, where you will find a brief description of the items in your box, and how to setup your computer.
- A **Specifications** sheet, containing a table of specifications, a list of bundled software and an overview of all connectors.
- A **Guide to Troubleshooting and Recovering your VAIO System**, where you will find solutions to common problems, an explanation of how to recover your computer's system if you need to, and VAIO-Link information.
- Your **Sony Guarantee conditions**.
- A **Safety Regulations** leaflet.
- A **Wireless Lan Regulations** leaflet.

Non-printed documentation

Click on the desktop icon  My Info Centre , then **My Documentation**  to view the VAIO user guides.

- ❑ The **Hardware Guide** (this guide) explains the features of your VAIO in detail, how to use these features confidently and safely, connect peripheral devices, upgrade your computer, and more.
- ❑ The **Software Guide** describes how to register your VAIO, the software features available with VAIO systems, how to change settings, how to manage drivers and more.

My Documentation also gives you:

- ❑ Help files about reading the guides.
- ❑ Important information about your computer, in the form of notices and announcements.

My Info Centre also gives you:

My Software

Feeling creative? Click on this icon for an overview of your software and check out our upgrade options.

My VAIO essentials

Want to expand the capabilities of your VAIO? Click on this icon and have a look at your compatible accessories.

My Websites

Click on this icon and check out our most popular websites.

My ISP

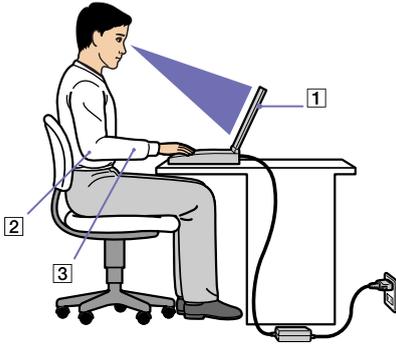

Click on this icon to find out about the preferred offerings from our partners and access the world of the internet.

Further sources

- 1 Consult the **Online Help** files of the software you are using for detailed information on features and troubleshooting.
- 2 Go to <http://www.club-vaio.com> to find online tutorials about your favourite VAIO software.

Ergonomic considerations

You will be using your computer as a portable device in a variety of environments. Whenever possible, you should attempt to take account of the following ergonomic considerations to both stationary and portable environments:

- ❑ **Position of your computer** – Place the computer directly in front of you (1). Keep your forearms horizontal (2), with your wrists in a neutral, comfortable position (3) while using the keyboard, pointer, or external mouse. Let your upper arms hang naturally at your sides. Have breaks during sessions with your computer. Excessive use of the computer may strain muscles or tendons.
- ❑ **Furniture and posture** – Sit in a chair with good back support. Adjust the level of the chair so your feet are flat on the floor. A footrest may make you more comfortable. Sit in a relaxed, upright posture and avoid slouching forward or leaning far backwards.
- ❑ **Viewing angle of the computer's display** – Use the display's tilting feature to find the best position. You can reduce eye strain and muscle fatigue by adjusting the tilt of the display to the proper position. Adjust the brightness setting of the display as well.
- ❑ **Lighting** – Choose a location where windows and lights do not create glare and reflection on the display. Use indirect lighting to avoid bright spots on the display. You can also purchase accessories for your display that help reduce glare. Proper lighting adds to your comfort and work effectiveness.
- ❑ **Positioning an external display** – When using an external display, set the display at a comfortable viewing distance. Make sure the display screen is at eye level or slightly lower when you are sitting in front of the monitor.

Using your VAIO computer

Once you have read and followed the information in the printed **Getting Started** guide and **Specifications** sheet, you can start using your computer safely and confidently.

Read on to get the most out of using your VAIO computer.

- ❑ **Connecting a power source** ([page 14](#))
- ❑ **Setting up your computer with Sony Notebook Setup** ([page 18](#))
- ❑ **Shutting down your computer safely** ([page 20](#))
- ❑ **Using the keyboard** ([page 21](#))
- ❑ **Using the pointing device** ([page 24](#))
- ❑ **Using the disc drive** ([page 25](#))
- ❑ **Using PC Cards** ([page 33](#))
- ❑ **Using the Memory Stick** ([page 37](#))
- ❑ **Using Wireless LAN (WLAN)** ([page 41](#))
- ❑ **Using power saving modes** ([page 50](#))
- ❑ **Managing power with VAIO Power Management** ([page 53](#))

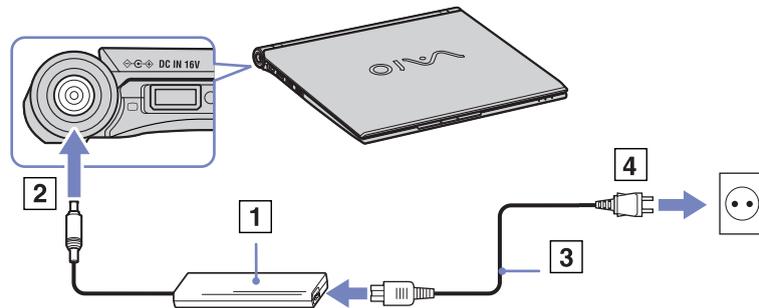

Connecting a power source

You can use either an AC adapter or a rechargeable battery pack as a power source. The supplied battery is not charged when you receive your computer. To use your computer immediately, use the supplied AC adapter as the power source. While the computer uses AC power, it automatically charges the battery if it is inserted. See **Using the battery pack (page 15)** for more information on installing and using your battery.

Using the AC adapter

To use the AC adapter, proceed as follows:

- 1 Plug the cable attached to the AC adapter (1) into the DC In connector (2) on the computer.
- 2 Plug one end of the power cord (3) into the AC adapter.
- 3 Plug the other end of the power cord into an AC outlet (4). The LED indicator of the AC adapter turns green (5).

 Use your computer only with the supplied AC adapter.

To disconnect your computer completely from mains voltage, unplug the AC adapter.

Make sure that the socket outlet is easily accessible.

 If you press unintentionally the power button while your computer is in use, the system will go into **Hibernate** mode.

If you want to change this setting, proceed as follows:

- 1) Click **Start** and go to **Control Panel**.
- 2) Click the **Performance and maintenance** icon.
- 3) Click the **Power Options** icon.

The **Power Options** properties appear.

- 4) Click the **Advanced** tab and change the settings there.

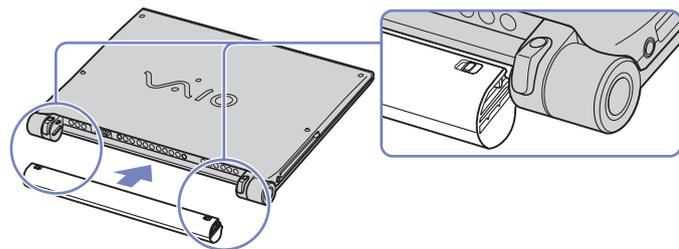

Using the battery pack

You can use one battery as a source of power. The battery pack supplied with your computer is not fully charged at the time of purchase.

Inserting the battery pack

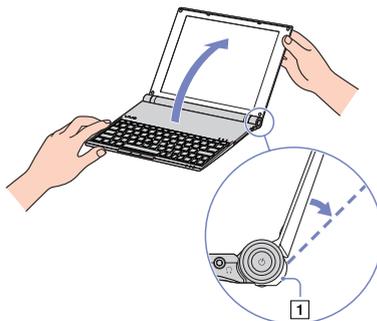

To insert the battery, proceed as follows:

- 1 Turn the computer over, and slide the **UNLOCK/LOCK** latches on the bottom of the computer to the **UNLOCK** position.
- 2 Align the grooves on the battery with the tabs on the back of the computer.
- 3 Slide the battery into the computer until it clicks into place.
- 4 Slide the **UNLOCK/LOCK** latches into the **LOCK** position.

 When the computer is directly connected to AC power and has a battery pack inserted in the battery bay, it uses power from the AC outlet.

! Do not open the LCD screen too far. Do not allow the LCD screen to hit the stopper (1). If you open/close the display panel with force, the LCD may deform or break.

Charging the battery pack

To charge the battery pack, proceed as follows:

- 1 Connect the AC adapter to the computer.
- 2 Insert the battery pack.

The computer automatically charges the battery (the battery indicator light flashes in a double blink pattern as the battery charges).

Depending on your model, your computer has one or two battery indicator lights.

Battery indicator light status *Meaning*

On	The computer is using battery power.
Single blink	The battery is running out of power.
Double blink	The battery is charging.
Off	The computer is using AC power.

 When the battery is running out of power, both the battery and power indicators blink.

Keep the battery pack in the computer while it is directly connected to AC power. The battery pack continues to charge while you are using the computer.

If the battery level falls below 10%, you should either attach the AC adapter to recharge the battery or shut down your computer and insert a fully charged battery.

The battery pack supplied with your computer is a lithium ion battery and can be recharged any time. Charging a partially discharged battery does not affect battery life.

The battery indicator light is on while you use the battery pack as a power source. When the battery life is nearly depleted, both the battery and power indicators start flashing.

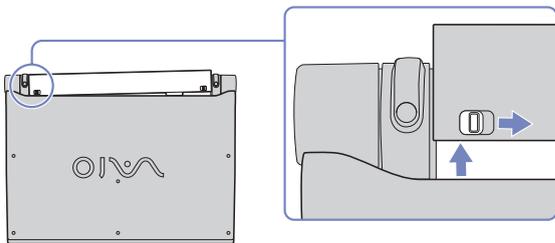

For some software applications and some peripheral devices, your computer may not enter **Hibernate** mode even when battery life is low. To avoid loss of data when using battery power, you should save your data frequently and manually activate a power management mode, such as **Standby** or **Hibernate**.

When the computer is directly connected to AC power and has a battery pack inserted in the battery bay, it uses power from the AC outlet.

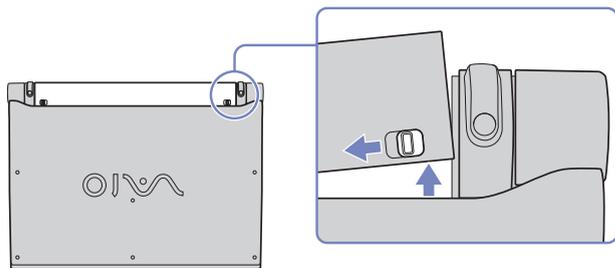

Removing the battery pack

To remove the battery pack, proceed as follows:

- 1 Turn off the computer and turn the computer over.
- 2 Slide the **UNLOCK/LOCK** latches on the bottom of the computer to the **UNLOCK** position.

- 3 While holding the **UNLOCK** latches, slide the battery away from the computer.

 You can remove the battery pack without turning off the computer if it is connected to the mains voltage (AC adapter).

You may lose data if you remove the battery pack while the computer is on and not connected to the AC adapter or if you remove the battery while the computer is in **Standby** mode.

Setting up your computer with Sony Notebook Setup

The **Sony Notebook Setup** utility allows you to consult system information, specify preferences for system behaviour, and set up password protection for your VAIO computer.

To use Sony Notebook Setup, proceed as follows:

- 1 Click the **Start** button on the **Windows** taskbar.
- 2 In **All Programs**, select **Sony Notebook Setup** and then click **Sony Notebook Setup**. The **Sony Notebook Setup** window appears.

<i>Tab</i>	<i>Description</i>
About This Computer	Displays system information, including memory capacity, serial number, and BIOS version.
Initial Setting	Selects the drive and device order you wish to use for loading the operating system. You can specify the hard drive as well as other drives inserted into your computer. You can change the volume of the sounds played while the operating system is loading.
Power On Password	Sets the password to secure your computer. If you use this option, remember the password at all times. If you forget the password, you cannot change this setting anymore, and you will not be able to start your computer.
Device	Disables ports or devices to release resources to the system. To change the port settings, select a port and click Settings in the Device tab.
S Buttons (depending on your model)	You can link an action that you often perform to the S1 button (button next to the power button). In Sony Notebook Setup there are some actions pre-defined: Standby , Hibernate , External Display , Launch Application . If the Bluetooth functionality is installed, another option appears in the drop-down list: Waiting for receiving files (Bluetooth Communication) .
Plug and Display (depending on your model)	By default, when you connect your computer to an external display, the external display is automatically detected and Hotkey Utility automatically outputs to this display. If you want to disable this function or change the settings, you can do this in this tab.

<i>Tab</i>	<i>Description</i>
Automatic Brightness (depending on your model)	By default, the light sensor senses the brightness from outside and the display brightness is adjusted accordingly. This setting only applies when the display is set to automatic brightness mode. Press the brightness button to set the display to automatic brightness mode. You can adjust the general level of the automatic brightness mode in this tab. There are 3 possibilities: Brightest , Standard and Darkest .
Station/Port replicator (depending on your model)	You can select if you want the digital and/or analogue output to the speaker and the optical out on the docking station/port replicator.
Bass boost (depending on your model)	Turns the Bass Boost function on/off (only with headphones). You can also check the effect of the Bass Boost function by selecting a sound file sample and playing it.
S1 S2 buttons (depending on your model)	Sets the functions from a drop-down list for the S1/S2 buttons located next to the keyboard. Select External Display and click Advanced to set up the display options.

3 Select the tab for the item you want to change.

4 Once finished, click **OK**.
The item has been changed.

 For more information about each option, click Help on the **Sony Notebook Setup** screen to display the help file.

If you open **Sony Notebook Setup** as a limited user, then only the **About This Computer** tab will be visible.

Shutting down your computer safely

It is important that you shut down your computer properly so you do not lose unsaved data.

To shut down your computer, proceed as follows:

- 1 Turn off any peripherals connected to your computer.
- 2 Click the **Start** button.
- 3 Click **Turn Off Computer**.
The **Turn off computer** window appears.
- 4 Click **Turn Off**.
- 5 Respond to any prompts warning you to save documents or to consider other users and wait for your computer to turn off automatically.
The power indicator turns off.

 See the printed **Troubleshooting guide** if you have problems shutting down your computer.

Using the keyboard

Your keyboard is very similar to a desktop computer's, but has additional keys that perform specific notebook-related tasks. For more information on the standard keys, please go to the **Windows Help and Support Center**.

The VAIO-Link website (www.vaio-link.com) also contains glossary information to help you use the keyboard.

Combinations and functions with the <Fn> key

Combinations/Feature	Functions
<Fn> +  (F4): speaker volume	Adjusts the built-in speaker volume. To increase volume, press <Fn>+<F4> and then  or  . To decrease volume, press <Fn>+<F4> and then  or  .
<Fn> +  (F3): speaker volume	Toggles the built-in speaker on and off.
<Fn> +  (F5): brightness control	Adjusts the brightness of the LCD. To increase lightness intensity, press <Fn>+<F5> and then  or  . To decrease light intensity, press <Fn>+<F5> and then  or  .
<Fn> + (F7)*: switch to the external display	Toggles between the LCD and external device. This function can only be used by the first user to log in. It will not work under a second user account.
<Fn> + (F12): Hibernate	Provides for the lowest level of power consumption. When you execute this command, the states of the system and of the peripheral devices are written to the hard disk and the system power is turned off. To return the system to its original state, use the power switch to turn on the power. For details on power management, see the section Using power saving modes (page 50).
<Fn> + : Bass Boost	Activates Bass Boost . This means that the bass sound level is enhanced at all levels without distorting other frequencies (only with headphones).

! * This function can only be used by the first user to log on. It will not work if you have switched to another user account. If another user wants to display on an external monitor, use the monitor properties to switch to an external monitor or TV.

 Some functions are not available until Windows is launched.

Troubleshooting sound

My speakers are not producing sound

- If your computer is powered by battery, check that the battery is inserted properly and that it is charged.
- If you are using an application that has its own volume control, check that the volume is turned up.
- Check the volume controls in Windows.

Indicators

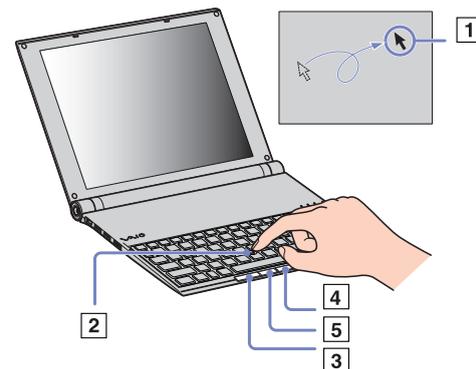

<i>Indicator</i>	<i>Functions</i>
Power 	Power on: lights green. Standby mode: flashes amber.
Battery 	Indicates the status of the battery.

<i>Light</i>	<i>On</i>	<i>Off</i>
Hard disk 	Data is read from or written to the hard drive.	The hard drive is not being accessed.
Num Lock 	Turns on when the number keys in the numeric keypad are active.	Turns off when the alphanumeric character keys in the keypad area are active.
Caps Lock 	Turns on when the letters appear in uppercase as you type. The <Shift> key lowers the case of typed characters when Caps Lock is on.	Turns off when the letters appear in lowercase as you type (unless you hold down the <Shift> key).
Scroll Lock 	Turns on when the screen scrolls differently (Not all applications support this function).	Turns off when the information moves across the display normally.

Using the pointing device

The keyboard contains a cursor-pointing device (1). You can point to, select, drag, and scroll objects on the screen using the built-in pointing device.

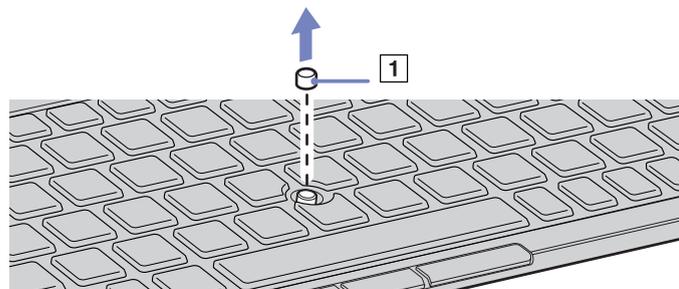

Action	Description
Point	Press the pointing device (2) in a direction to place the pointer on an on-screen item or object.
Click	Press the left button (3) once.
Double-click	Press the left button twice.
Right-click	Press the right button (4) once. In many applications, this action displays a shortcut menu.
Drag	Press the pointing device in a direction to place the pointer on an on-screen item or object. While holding the left button, press the pointing device in a direction, and then release it at the desired point.
Scroll	Press the pointing device while pressing the centre button (5).

 The scroll function is available only with applications that support a scroll pointing device feature. Pressing the pointing device too hard may damage it.

You can take off the pointing device cover (1) and replace it with the additional cover supplied with your computer.

 Make sure the cover is tightly secured to prevent damage to the screen when you close the computer.

Using the disc drive

Your computer is delivered with an external i.LINK optical disc drive.

Setting up the drive

The i.LINK drive is delivered with the following components:

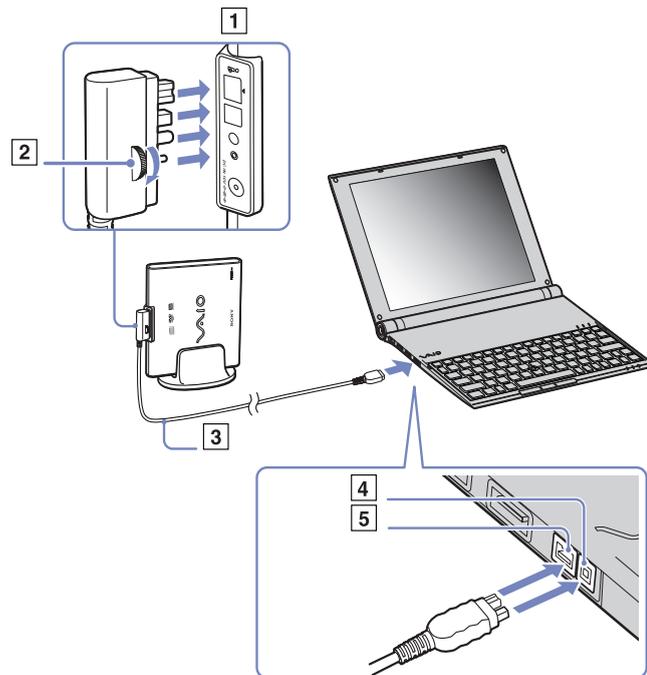

1. Optical drive
2. VAIO peripheral cable

Connecting the drive

Next to your computer's S400 i.LINK connector is a VAIO peripheral original connector. The i.LINK drive's cable has a two-pin plug that has to be connected into both the S400 i.LINK connector and the VAIO peripheral original connector.

To connect the drive, proceed as follows:

- 1 Plug the four-pin end of the i.LINK drive's cable into the optical disc (1).
- 2 Scroll the LOCK wheel (2) to lock the i.LINK drive's cable.
- 3 Plug the two-pin end of the i.LINK drive's cable (3) into the notebook's S400 i.LINK connector (4) and the VAIO peripheral original connector (5).

Removing the drive

To remove the drive, proceed as follows:

Pull the two-pin end of the i.LINK drive's cable from the notebook's S400 i.LINK connector and the VAIO peripheral connector.

 For more information on using the i.LINK optical disc drive, please read the **Operating Instructions** that come with the optical drive.

Inserting a disc

To insert a disc, proceed as follows:

- 1 Turn on the computer.
- 2 Press the eject button to open the drive.
The tray slides out.
- 3 Place a disc in the middle of the tray with the label side facing up until the disc clicks into place.
- 4 Close the tray by pushing it gently.

 See the **Troubleshooting Guide** if you have problems using discs.

Reading and writing CDs and DVDs

To achieve optimum performance when writing data on to disc (also called 'burning'), follow these recommendations :

- ❑ To make the data on a disc readable on an optical drive, you need to close the session when you eject it. To complete this process, follow the instructions included with your software.
- ❑ Only use circular discs. Do not use discs with any other shape (star, heart, card, etc.), as this may damage the disk drive.
- ❑ Do not strike or shake the computer while writing data to a disc.
- ❑ For optimal writing speed, deactivate the screensaver before writing data to a disc.
- ❑ Memory-resident disc utilities may cause unstable operation or data loss. Deactivate these utilities before writing data to a disc.
- ❑ When using your software application to burn discs, make sure you exit and close all other applications.
- ❑ Never touch the surface of the disc. Fingerprints and dust on the surface of a disc may cause writing errors.
- ❑ Do not put your VAIO computer into a power saving mode while using the pre-installed software and while using the CD burning software.
- ❑ Never put stickers on discs. This will affect the use of the disc irreparably.

 Ultra-speed CD-RW is not supported.

Does not support DVD-RW 2x-4x writing.

Supports the following DVD-RW discs: DVD-RW version 1.1 (1x speed) and DVD-RW version 1.1/2x-SPEED DVD-RW revision 1.0 (1x-2x speed).

Does not support the following DVD-RW discs: DVD-RW version 1.2/4x-SPEED DVD-RW revision 2.0 (2x-4x speed read only).

Supports 8cm disc reading, but does not support 8cm disc writing.

Playing DVDs

To achieve optimum performance when playing DVDs, you should follow these recommendations.

- You can play DVDs using the optical drive and the **WinDVD for VAIO** software. See the help file on the **WinDVD for VAIO** software for details.
- Close all open applications before playing a DVD movie.
- Do not use resident disc utilities or resident utilities to speed up the access of discs, because they may cause the system to become unstable.
- Make sure that the screensaver is deactivated.
- Region codes indicators are labelled on the DVDs to indicate in which region and on what type of player you can play the disc. Unless a '2' (Europe belongs to region '2') or 'all' (this means that you can play this DVD everywhere in the world) is labelled on your DVD disc or on the packaging, you cannot play the disc on this player.
- Do not try to change the region code settings of the DVD drive. Any difficulties caused by changing the region code settings of the DVD drive are out of warranty.
- If Wireless LAN is activated, playing DVDs may cause some interruptions in audio and video.

Troubleshooting optical disc drive

My disc drive tray does not open

- Make sure the computer is turned on and press the eject button on the drive.
- Click **Start**, and select **My Computer**. Right-click the optical disc drive and select **Eject**.
- Make sure the computer is not in **Standby** or **Hibernate** mode.
- If this does not work, try the following:
 - When the computer is OFF, open the tray by inserting the bundled pin into the hole next to the eject button.

I cannot play a disc

- After inserting the disc, wait for a few seconds for the system to detect it before you try to access it.
- Make sure the label of the disc is facing up.
- If the disc requires software, make sure the software is installed according to the instructions of the program.
- Check the volume of your speakers.
- Clean the disc with an appropriate cleaner.
- Make sure your computer is running on AC power supply only and try the disc again.
- There may be condensation in the drive. Remove the disc and leave the drive open for approximately one hour. Remove the battery while you wait for the condensation to disappear.

I cannot play a DVD

- If a region code warning appears when you are using the DVD player, it could be that the DVD you are trying to play is incompatible with the DVD drive on your computer. The region code is listed on the packaging of the disc.
- Change the resolution under **Control Panel - Display** to a lower resolution.

- ❑ If you see video but cannot hear sound, check all of the following:
 - ❑ Make sure the mute setting is off on your DVD player.
 - ❑ Check the **Master Volume** settings of the **Sounds and Audio Device Properties**.
 - ❑ If you have connected speakers externally, check the volume settings of your computer speakers and check the connections between your speakers and the computer.
 - ❑ In the **Device Manager**, check that the correct drivers are installed properly. To display the **Device Manager**, click **Start**, then **Control Panel**. Double-click the **System** icon. On the **Hardware** tab, click the **Device Manager** button.
 - ❑ A dirty or damaged disc may cause the computer to 'hang' while it tries to read the disc. If necessary, reboot the computer, remove the disc and then check that it is not dirty or damaged.
 - ❑ Check your PG settings (Parental Guidance) in the DVD software as they might be preventing you from playing certain DVDs when they are activated.
-  On your computer, the default DVD region code is 2. Do not change this setting using the **Region Code Change** function in Windows, or using any other software applications. System malfunctions originating from the user changing the DVD region code are beyond the scope of your warranty and will result in service charges for repair.
- If you do not immediately see the **Display** icon after clicking **Control Panel**, click **Switch to Classic View** on the left.

I cannot play a DVD when using two screens

- ❑ You will not have a problem in the following situations:
 - ❑ When you use a CRT or an LCD display on its own.
 - ❑ When you play MPEG files which are recorded on the hard drive with Windows Media Player 9.

The reading speed of CD/DVD-RWs is very slow

Generally, the reading speed of a CD/DVD-RW is slower than that of a -ROM or -R. The reading speed can also vary depending on the type of format.

The disc tray does not eject even when the eject button is pressed

- ❑ Check that the computer is turned on.
- ❑ The CD-writing application software may be stopping the disk from being ejected.
- ❑ Make sure the computer is not in **Standby** or **Hibernate** mode.

The disc tray ejects even when it has been locked into place

- ❑ Ensure that the disc is placed with the label side facing up.
- ❑ Clean the disc and the disc drive lens with an appropriate cleaner.
- ❑ The disc may be scratched. Place another disc to see if that is the reason.
- ❑ There may be condensation in the drive. Remove the disc and leave the drive open for approximately one hour. Remove the battery while you wait for the condensation to disappear.

Using PC Cards

Your computer includes a PC Card slot. PC Cards allow you to connect portable external devices. Please see your printed **Specifications** sheet to see if your computer has one or two PC Card slots.

In the PC Card slot you can insert two types of PC Cards: the bundled **Wireless LAN PC Card** and the bundled **multicard adapter**. The multicard adapter is a **5-in-1** adapter. It supports the following formats:

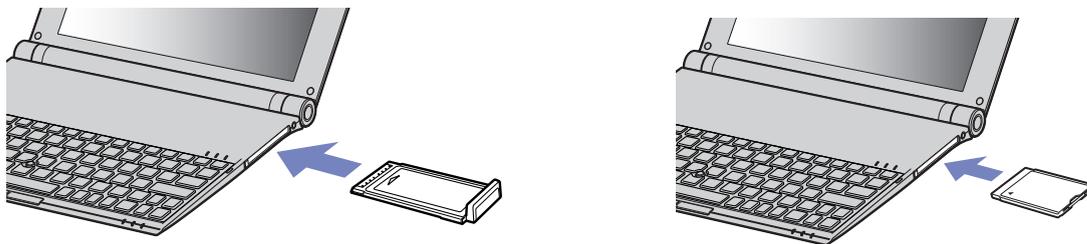

- ❑ **Memory Stick:** See **Using the Memory Stick (page 37)**.
- ❑ **Memory Stick PRO:** See **Using the Memory Stick (page 37)**.
- ❑ **Secure Digital Card:** The Secure Digital (SD) card is a small, high-capacity data storage media card.
- ❑ **MultiMedia Card:** A MultiMediaCard (MMC) is a tiny memory card that uses flash memory to make storage portable among various devices, such as car navigation systems, mobile phones, eBooks, PDAs, smartphones, digital cameras, music players, and video camcorders, and personal computers.
- ❑ **SmartMedia:** A SmartMedia card (originally called a solid-state floppy disk card) is a memory card that uses flash memory to store data and to make it portable among devices, such as digital cameras, personal digital assistants (PDAs), and other handheld devices. SmartMedia has a storage capacities ranging up to 128 MB.

 You do not need to shut down your computer when inserting a PC Card.

Inserting a PC Card

To insert a PC Card, proceed as follows:

- 1 Remove the dummy card from the slot.
- 2 Insert the PC Card (left: Wireless LAN PC Card / right: multcard adapter) into one of the PC Card slots with the front label facing upwards.

- 3 Gently push the PC Card slot into the connector.
The PC Card is automatically detected by your system.
The **Safely Remove Hardware** icon appears in the system tray.

 Some devices may not function properly if you repeat returning to **Normal** mode from **Standby** mode or **Hibernate** mode.

The computer will return to its original state if you restart it.

If your computer has two PC Card slots, the PC Card slots can accommodate (at the same time) two Type I, two Type II or one Type III PC Card. These slots are compatible with Card Bus ports.

If your computer has two PC Card slots, use the lower slot for PC Type III cards.

Some PC Cards may require you to disable idle devices when using the PC Card.

Make sure you use the most recent software driver provided by the PC Card manufacturer.

If an "!" mark appears on the **Device Manager** tab in the **System Properties** dialog box, remove the software driver and then reinstall it.

You do not need to shut down the computer before inserting or removing a PC Card.

Do not force a PC Card into the slot. It may damage the connector pins. If you have difficulty inserting a PC Card, check that you are inserting the PC Card in the correct direction. See the manual supplied with your PC Card for more information on use.

For some PC Cards, if you alternate between **Normal** power operation and **Standby** or **Hibernate** power management modes while the card is inserted, you may find that a device connected to your system is not recognised. Restart your system to correct the problem.

Do not carry your computer while touching the head of a PC Card, as pressure or shock may damage the connector pins.

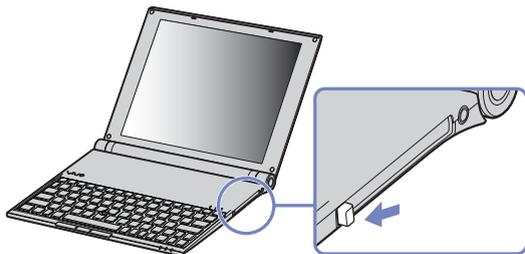

If your computer has two PC Card slots, it is recommended that you always use the same slot for a PC Card as switching slots can cause problems with some PC Cards.

Removing a PC Card

Follow the steps below to remove the PC Card while your computer is on. If it is not removed properly, your system may not work properly. If you want to remove a PC Card when your computer is off, skip steps 1 to 7.

To remove a PC Card, proceed as follows:

- 1 Double-click the **Safely Remove Hardware** icon in the system tray.
The **Safely Remove Hardware** dialog box appears.
- 2 Select the hardware you want to unplug.
- 3 Click **Stop**.
- 4 In the **Stop a Hardware Device** dialog box, confirm that the device can be safely removed from the system.
- 5 Click **OK**.
A dialog box appears, explaining that it is safe to remove the device.
- 6 Click **OK**.
- 7 Click **Close**.
- 8 Push the PC Card release button so that the release button pops out.

- 9 Push the PC Card release button a second time so that the PC Card pops out.
- 10 Gently take hold of the Card and pull it out of the slot.
- 11 If the PC Card release button is still out, push it back in to close the front panel cover.

 If you unplug the PC Card from the computer when it is still turned on, your system might crash and you might lose data that you did not save before.

Before you remove the PC Card, click the PC Card icon in the taskbar and close the card. Close any applications that use the PC Card before removing the card. Otherwise, data may be lost.

While the card is inserted, your computer may not enter the **Hibernate** power management mode. It may enter **Standby** mode. It is recommended that you remove the card before your computer enters **Hibernate** mode by pressing the <Fn>+<F12> keys, and when it is set to enter **Hibernate** automatically while using a battery as the source of power.

Some PC Cards or their functions may not be compatible with this computer.

Troubleshooting PC Card

My PC Card is not working

- Make sure the PC Card is compatible with your version of Windows.
- Use the **Sony Notebook Setup** utility to disable devices you are not currently using.

Using the Memory Stick

Your VAIO computer is designed to support the Memory Stick. The Memory Stick is a compact, portable, and versatile device especially designed for exchanging and sharing digital data with compatible products, such as digital cameras, mobile phones and CLIE handheld devices. Because it is removable, it can be used for external data storage.

Use the flash memory technology to download anything that can be converted into digital data, such as pictures, music, words, sounds, movies and photographs. The Memory Stick family ranges in capacity and compatibility.

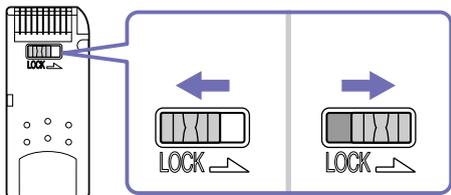

Please see your printed **Specifications** sheet to see which Memory Stick types are compatible with your VAIO and if there are any limitations.

- ❑ You can purchase Memory Sticks from the Sony Style website (www.sonystyle-europe.com), or from your local Sony dealer.
- ❑ Detailed information about which CLIE handhelds are compatible with which Memory Sticks can be found here: www.clie-link.com.
- ❑ Detailed information about which VAIO computers are compatible with which Memory Sticks can be found here: www.vaio-link.com.

Write-protecting a Memory Stick

Some Memory Sticks are designed with an erasure prevention switch to protect valuable data from accidental erasure or overwriting.

Move the tab horizontally or vertically* to set or release write-protection. When the erasure prevention switch is off, data can be saved on the Memory Stick. When the erasure prevention switch is on, data can be read from but not saved on the Memory Stick.

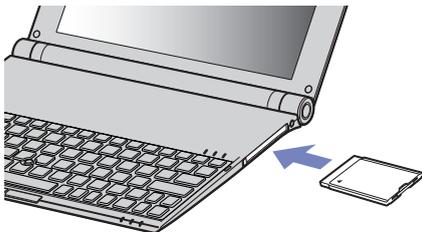

* Some kinds of Memory Stick do not have a lock switch.

Inserting a Memory Stick

To insert a Memory Stick, proceed as follows:

- 1 Insert the **multicard adapter** into the PC Card slot.

- 2 Once you have stored your data from your digital device, insert the Memory Stick with the arrow facing up and toward the multicard adapter.
 - 3 Carefully slide the Memory Stick into the multicard adapter until it clicks in place. The Memory Stick is automatically detected by your system and appears in your **My Computer** window as a local drive, under the appropriate letter (depending on the configuration of your computer).
- ! Hold the Memory Stick with the arrow pointing in the correct direction when you insert it into the multicard adapter. To avoid damaging the computer or the Memory Stick, do not force the Memory Stick into the adapter if it does not insert smoothly.

Removing a Memory Stick

To remove a Memory Stick, proceed as follows:

- 1 Push the Memory Stick in towards the computer.
The Memory Stick ejects.
- 2 Pull the Memory Stick out of the slot.

 Always remove the Memory Stick gently, or it may pop out unexpectedly.

It is recommended that you remove the Memory Stick before shutting down the computer.

Using Wireless LAN (WLAN)

Thanks to Sony's Wireless LAN (WLAN), all your digital devices with WLAN functionality communicate freely with each other through a powerful network. A WLAN is a network in which a mobile user can connect to a local area network (LAN) through a wireless (radio) connection. So there is no need anymore to pull cables or wires through walls and ceilings.

The Sony WLAN supports all normal Ethernet activities, but with the added benefits of mobility and roaming. You can still access information, internet/intranet and network resources, even in the middle of a meeting, or as you move from one place to another. You can communicate **without an Access Point**, this means that you can communicate between a limited number of computers (**ad-hoc**), or you can communicate through **an Access Point**, which allows you to create a full infrastructure network (**infrastructure**).

 In some countries, using WLAN products may be restricted by the local regulations (e.g. limited number of channels). Therefore, before activating the WLAN functionality, read the **Wireless LAN Regulation** leaflet carefully. Channel selection is explained further in this manual (see **Wireless LAN channel selection** (page 47)).

WLAN uses the IEEE 802.11b/g standard, which specifies the used technology. The standard includes the encryption method: **Wired Equivalent Privacy (WEP)**, which is a security protocol and **WiFi Protected Access (WPA - Proposed jointly by the IEEE and Wi-Fi Alliance, WiFi Protected Access is a specification of standards based, interoperable security enhancements that increase the level of data protection and access control for existing WiFi networks. WPA has been designed to be forward compatible with the IEEE 802.11i specification. It utilizes the enhanced data encryption TKIP (Temporal Key Integrity Protocol) in addition to user authentication using 802.1X and EAP (Extensible Authentication Protocol)). Data encryption protects the vulnerable wireless link between clients and Access Points. Besides that, there are other typical LAN security mechanisms to ensure privacy, such as: password protection, end-to-end encryption, virtual private networks, and authentication.**

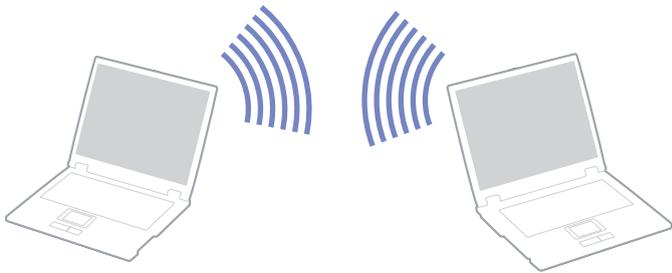

Wireless LAN devices using the IEEE 802.11a standard and the ones using the IEEE 802.11b or g standard cannot communicate because the frequencies are different. Wireless LAN devices using the IEEE 802.11g standard can only communicate with a device using the IEEE 802.11b standard, not with the 802.11a standard.

IEEE 802.11b: The standard speed is 11 Mbps, or about 30 to 100 times faster than a standard dial up.

IEEE 802.11g: The standard speed is 54 Mbps, or about 5 times faster than a Wireless LAN device using the IEEE 802.11b standard (when working exclusively in 802.11g mode and not in a mixed b/g mode).

Communicating without Access Point (*ad-hoc*)

An ad-hoc network is a network in which a local network is created only by the wireless devices themselves, with no other central controller or Access Point. Each device communicates directly with other devices in the network. You can set up an ad-hoc network easily at home.

To communicate without Access Point (*ad-hoc*), proceed as follows:

- 1 Insert the Wireless LAN PC Card.
- 2 Double-click the network icon in the taskbar displaying **Wireless Network Connection**.
The **Connect to Wireless Network** dialog box appears.
- 3 Click the **Advanced** button.
The **Wireless Network Connection Properties** dialog box appears.
- 4 Select the **Wireless Networks** tab.
- 5 Click the **Add...** button.
The **Wireless Network Properties** dialog box appears.
- 6 Enter a **Network name (SSID)***.
You can choose a **6-digit** name.
- 7 Select **Open** from the **Network Authentication** drop-down box.

- 8 Select **WEP** from the **Data Encryption** drop-down box.
- 9 Deselect the **The key is provided for me automatically** option button.
Some information becomes visible.
- 10 Fill in the **Network key***.
The network key should be **5 or 13 ASCII characters** or **10 or 26 hexadecimal characters** long. You can choose whatever you want**.
- 11 Fill in exactly the same **Network key** again, for confirmation.
- 12 Select the checkbox **This is a computer to computer (ad hoc) network; wireless access points are not used** at the bottom of the screen.
- 13 Click **OK**.
Your **Network name** appears in the **Preferred networks**.
- 14 Click **Advanced**.
The **Advanced** dialog box appears.
- 15 Select the **Computer-to-computer (ad hoc) networks only** option button.
- 16 Click **Close**.
- 17 Click **OK**.
Your computer is ready to communicate with another computer.

* If you want to communicate between two or more computers, you need to configure all these computers the exact same way.

This means that you need to enter the same **Network name** and the same **Network key** on all computers as on the first computer you configure.

** **ASCII**: The basis of character sets used in almost all present-day computers. ASCII is a code for representing English characters as numbers, with each letter assigned a number from 0 to 127.

Hexadecimal: A number representation using the digits 0-9, with their usual meaning, plus the letters A-F (or a-f) to represent hexadecimal digits with values of (decimal) 10 to 15.

 In France, only certain channels are legally allowed when using WLAN outdoors.

For more information, see the **Wireless LAN Regulations** leaflet.

An ad-hoc network does not support WPA.

Communicating with an Access Point (infrastructure)

An infrastructure network is a network that extends an existing wired local network to wireless devices by providing an Access Point, for example the **Sony PCWA-A320 Access Point**. The Access Point bridges the wireless and wired LAN and acts as a central controller for the Wireless LAN. The Access Point coordinates transmission and reception from multiple wireless devices within a specific range.

To communicate with an Access Point (infrastructure), proceed as follows:

- 1 Insert the Wireless LAN PC Card.
- 2 Right-click the network icon  in the taskbar displaying the **Wireless Network Connection** message.
- 3 Click **View Available Wireless Networks**.
The **Wireless Network Connection** dialog box appears.
- 4 Select the network you want to use.
- 5 Type the **Network Key**.

If you are using the **Sony Access Point PCWA-A320**, by default, you don't need to enter any encryption key (WEP/WPA). To be able to communicate, you must select the box **Allow me to connect to the selected wireless network, even though it is not secure**.

6 Click Connect.

After 30 seconds, the connection is established.

For more information about setting up an access point, see the documentation supplied with your **Access Point**.

 The WPA key needs to contain at least 8 characters.

Using the WiFi protected access (WPA)

WPA is a wireless security enhancement that allows you to transfer data in a highly secure way*.

To use WPA on your notebook, proceed as follows:

- 1 Insert the Wireless LAN PC Card.
- 2 Right-click the network icon in the taskbar displaying **Wireless Network Connection**.
- 3 Select **View available network connections**.
The **Wireless Network Properties** dialog box appears.
- 4 Select the wireless network to which you want to connect.
- 5 Fill in the **Network key**.
The network key should be at least 8 characters long. You can choose whatever you want.
- 6 Fill in exactly the same **Network key** again, for confirmation.
- 7 Click **Connect**.
The connection is established.

* For more information on the access point, please refer to its manual.

 In France, only certain channels are legally allowed when using WLAN outdoors. For more information, see the Wireless LAN Regulations leaflet.

WPA can be used with an access point only if it is supported by that access point.

An ad-hoc network does not support WPA.

Wireless LAN channel selection

You can use channels 1 to 13.

(a) With an Access Point ("Infrastructure")

- The channel used will be the channel selected by the Access Point.
- ATT: For details on how to select the channel that will be used by the Access Point, please refer to the corresponding Instruction Manual.

(b) Without Access Point ("Ad-Hoc")

- If the Wireless connection is initiated by the VAIO computer, channel 11 will be selected.
- ATT: In France, outdoors, Wireless LAN connections are only allowed on certain channels. For details, please refer to the **Wireless LAN Regulations** leaflet.
- If the Wireless connection is initiated by a peer Wireless LAN equipment, the Wireless LAN communication will make use of the channel selected by the peer Wireless LAN equipment.

Troubleshooting Wireless LAN

The Wireless LAN Access Point and your computer cannot communicate

- Check if the Wireless LAN PC Card is inserted correctly.
- Check if the power of the Access Point is turned on.
- Check if the Access Point is displayed in the **Available networks** window.
 - To check this, click **Start** and then **Control Panel**.
 - Double-click the **Network Connections** icon.
 - Right-click the **Wireless Network Connection** icon and select **Properties**.
 - Select the **Wireless Networks** tab.
 - Check if the Access Point is displayed in **Available networks**.
 - Connection availability is affected by distance and obstructions. You may need to move your computer away from obstructions or neared to any Access Point you may be using.

The data transfer speed is slow

- The maximum communication speed can vary depending on the obstacles or the distance between the communication devices, the radio waves, the operating system or the software you use. Remove the obstacle or make the distance between the Access Point and your machine smaller.
- It is possible that your Access Point communicates at the same time with another Access Point. Read the manual of the Access Point.
- If several computers communicate with the same Access Point, the concentration may be too high. Wait a few minutes and try to access again.

- ❑ If a Wireless LAN device using the IEEE 802.11g standard communicates with a device using the IEEE 802.11b standard, then it is normal that the speed reduces. Devices using the IEEE 802.11g standard are 5 times faster than the ones using the IEEE 802.11b standard.

I cannot access the Internet

- ❑ Check the settings of the Access Point. See the manual of the Access Point.
- ❑ Check if your computer and the Access Point are communicating.
- ❑ Make the distance between the Access Point and your machine smaller.

Using power saving modes

When you use a battery as the source of power for your computer, you can take advantage of power management settings to conserve battery life. In addition to the normal operating mode, which allows you to turn off specific devices, your computer has two distinct power saving modes: **Standby** and **Hibernate**. When using battery power, you should be aware that the computer automatically enters **Hibernate** mode when the remaining battery charge drops below 7 percent, regardless of the power management setting you select.

 If the battery level falls below 10 percent, you should either attach the AC adapter to recharge the battery or shut down your computer and insert a fully charged battery.

Using Normal mode

This is the normal state of your computer when it is in use. The green power indicator light is on in this mode. To save power while not working, you can turn off a specific device such as the LCD or the hard disk.

Using Standby mode

Standby mode turns off the LCD screen and sets the hard disk and the CPU to a low power consumption mode. The amber power light flashes in this mode.

To activate Standby mode, proceed as follows:

Go to **Start/Turn Off Computer** and press **Stand By**.

To return to **Normal** mode, press any key.

 If you press the power button for more than four seconds, the computer will switch off automatically.

When the computer is in **Standby** mode, you cannot insert a disc.

The computer comes out of **Standby** mode quicker than out of **Hibernate** mode.

Standby uses more power than **Hibernate**.

If the computer is not used for 25 minutes, it will enter **System Standby** mode when running on AC power. When running on batteries, the computer also will enter **System Standby** mode after 25 minutes if unused. To avoid this, you can change the settings in the **Power Options Properties** screen (right-click the **power status** icon in the taskbar - select **Adjust Power Properties** - select the **Power Schemes** tab and change the settings in **Settings for VAIO optimized power scheme**).

Using Hibernate mode

The state of the system is saved on the hard disk and power is turned off. The power indicator light is off in this mode.

To activate Hibernate mode, proceed as follows:

Press **<Fn>+<F12>**.

The **Hibernating** screen appears and the computer enters **Hibernate** mode.

Alternatively,

Click **Start**, and then **Turn Off Computer**.

In the **Turn off computer** screen, hold down the **<Shift>**-key and press **Hibernate**.

To return to Normal mode, proceed as follows:

Turn on the computer by pressing the power button.

The computer returns to its previous state.

 If you press the power button for more than four seconds, the computer will switch off automatically.

When the computer is in **Hibernate** mode, you cannot insert a disc.

Hibernate mode requires more time than **Standby** mode to be activated.

It takes more time to return to normal mode from **Hibernate** mode than from **Standby** mode.

Hibernate mode uses less power than **Standby** mode.

Do not move the computer until its power indicator turns off.

*Using the power switch to enter **Hibernate** mode*

If you press power switch while in use, the system will go into hibernation.

If you want to change this setting, proceed as follows:

- 1 Click **Start** and then **Control Panel**.
- 2 Click **Performance and Maintenance** then **Power Options**.
- 3 Make the changes under **Detailed Settings**.

Troubleshooting power management

The power management setting is not responding

Your computer's operating system may become unstable if a lower power state, such as **Hibernate** is initiated, and then changed before the computer completely enters the lower power state.

To restore the computer to its normal operating stability, proceed as follows:

- 1 Close all open applications.
- 2 Press **<Ctrl>+<Alt>+<Delete>** simultaneously and select **Restart** from the drop-down list.
The computer restarts.
- 3 If the procedure does not work, press and hold the power button for four seconds or longer to shut down the computer.

Managing power with VAIO Power Management

Power management helps you to set up power schemes of your computer that is running on AC power or batteries to suit your requirements for power consumption.

VAIO Power Management is a software application developed exclusively for VAIO computers. With this software application, you can enhance the Windows power management functions to ensure better operations of your computer and for longer battery life.

Activating VAIO Power Management

When you start the computer, a **power status** icon appears in the taskbar. This icon indicates what kind of power source you are using at that time, E.g., AC power. If you double-click this icon, the **Power Meter** screen appears showing you the power status.

VAIO Power Management functionalities are added to the Windows **Power Options Properties**.

To activate VAIO Power Management, proceed as follows:

- 1 Right-click the **power status** icon in the taskbar.
- 2 Select **Adjust Power Properties**.
The **Power Options Properties** screen appears.
- 3 Select the **VAIO Power Management** tab.

Activating VAIO Power Management power schemes

VAIO Power Management provides several predefined **power schemes**. Each power scheme consists of a group of power management settings that are designed to meet specific power management goals, ranging from maximum power management to no power management.

To activate a VAIO Power Management power scheme, proceed as follows:

- 1 Open **Adjust Power Properties**.
- 2 Select the **Power Schemes** tab.
- 3 Select a power scheme in the **Power schemes** drop-down list.
- 4 If you now select the **VAIO Power Management** tab, you see that the selected power scheme appears to the right of **Power Scheme**.
- 5 If necessary, you can change the items in the list, E.g., the brightness of the LCD.
- 6 Click **OK**.

The power scheme has been activated.

 To set up a power scheme, you must have a computer administrator account.

For more information on **VAIO Power Management** and **Power Schemes**, please read the online help file.

<i>Power Scheme</i>	<i>Description</i>
Power Management Off	Turns off all power management features such as Standby and Hibernate modes.
VAIO Optimized	The power management state when AC power is in use.
VAIO Maximum Battery	Provides power saving features to give you maximum battery life and good performance. It reduces the brightness of the display and puts the system into Standby mode after a specified time period.
VAIO Ultimate Battery	Extends the VAIO Maximum Battery by completely disabling the i.LINK port.

 If you have a mobile CPU (see the printed **Specifications** sheet), a CPU control icon may appear in the taskbar. The CPU control icon indicates the CPU control status (Performance, Adaptive, Battery Life, Degrade). To make the icon appear, click the **Advanced** button on the **VAIO Power Management** tab. Select the **Show CPU status icon in the taskbar** box and then click **OK**.

If you want to know more about the CPU control icon, read the online help file (**Other Information - Icons on the Notification Area**).

Restoring the default settings

The power scheme settings that you changed on the **VAIO Power Management** tab can be restored to the default settings.

To restore the default settings, proceed as follows:

- 1 Select the **VAIO Power Management** tab in the **Power Options Properties** window.
- 2 Click the **Advanced** button.
The **VAIO Power Management** window appears.
- 3 Click the **Reset by default** button.
The **Confirm** window appears.
- 4 Select the **Restore all power schemes to the original factory default settings**.
- 5 Click **OK**.
The **Confirm** window closes and the default settings are restored for all the power scheme options.

 This does not apply to timers on the **Power Schemes** tab.

VAIO Power Management Viewer

VAIO Power Management Viewer is installed on your computer.

To start VAIO Power Management Viewer, proceed as follows:

Click  on the **VAIO Power Management** tab.

Alternatively, you can go to **Start\All Programs\Security & Utilities\VAIO Power Management\VAIO Power Management Viewer**.

VAIO Power Management Viewer is provided with two tabs: **Running on batteries** and **Plugged in**. Starting the viewer automatically displays the tab appropriate to the current power scheme of your computer. On each tab, the radar chart shows performance with the current power scheme and the modified power scheme in the designated colors.

To change the power scheme, proceed as follows:

Select the desired power scheme from the drop-down list on VAIO Power Management Viewer.

To view performance with the power scheme modified with VAIO Power Management, proceed as follows:

When both VAIO Power Management and VAIO Power Management Viewer are running, VAIO Power Management Viewer shows performance with the power scheme that was modified with VAIO Power Management.

 Use VAIO Power Management to set up or modify the power scheme.

Connecting peripheral devices

You can add functionality to your computer by using the various ports on your unit.

- ❑ **Connecting an external display** ([page 58](#))
- ❑ **Selecting display modes** ([page 61](#))
- ❑ **Using the Dual Display function** ([page 63](#))
- ❑ **Connecting external speakers** ([page 67](#))
- ❑ **Connecting a Universal Serial Bus (USB) device** ([page 68](#))
- ❑ **Connecting a printer** ([page 73](#))
- ❑ **Connecting an i.LINK device** ([page 74](#))
- ❑ **Connecting to a network (LAN)** ([page 77](#))

To identify and locate the ports on your computer, please see the printed **Specifications** sheet.

Sony computer supplies, accessories and peripherals can be purchased from your local retailer or from the Sony website: www.sonymstyle-europe.com

For more information about connection compatibility, go to the VAIO-Link website: www.vaio-link.com

Connecting an external display

You can connect an external display to your computer. For example, you can use your computer with a computer display or a projector.

 Turn off your computer and the peripherals, unplug the AC adapter and the power cord before connecting the external display.

Connect the power cord after connecting all other cables.

Turn on the peripherals, then turn on your computer.

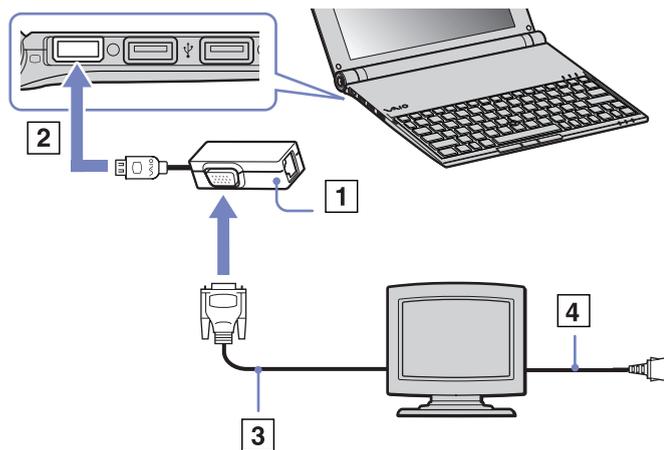

Connected external displays are used as second screens.

On Windows systems only, you can also use an external display to set up a virtual desktop.

Connecting a computer display

To connect a computer display, proceed as follows:

- 1 If you want to connect a VGA monitor, plug the supplied Ethernet/VGA adapter (1) into the monitor connector (2) from your computer.
- 2 Plug the display cable (3) (not supplied) into the Ethernet/VGA adapter.
- 3 If necessary, plug one end of the display's power cord (4) into the display, and the other end into an AC outlet.

Connecting a projector

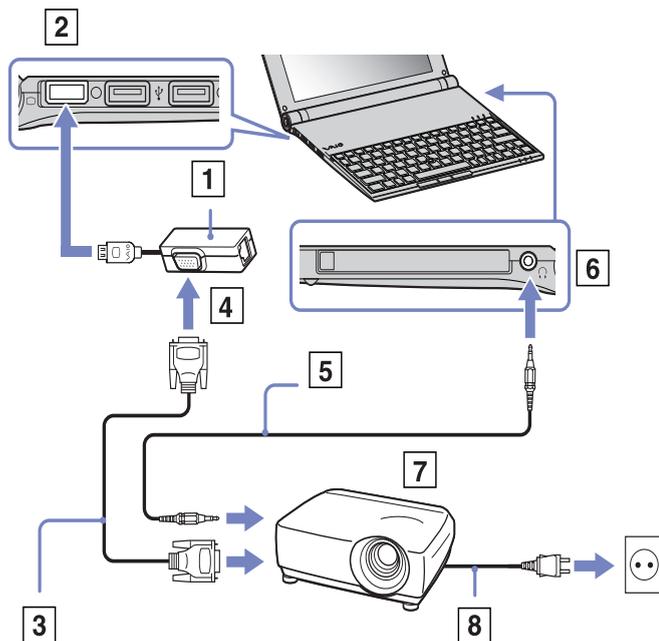

You can connect a projector (such as the Sony LCD projector) directly to your computer.

To connect a projector, proceed as follows:

- 1 Plug the supplied Ethernet/VGA adapter (1) into the monitor connector (2) of your computer.
- 2 Plug the RGB signal cable (3) into the monitor/VGA connector (4) identified by the  symbol of the Ethernet/VGA adapter.
- 3 Plug the audio cable (5) (not supplied) into the earphone connector (6) identified by the  symbol.
- 4 Plug the RGB signal cable and the audio cable into the connectors of the projector (7).
- 5 Connect the power cord (8) of the projector into an AC outlet.

 Under certain circumstances, you may not be able to display the computer LCD screen and an external display or a projector at the same time.

You can toggle the output between the computer LCD-screen and the external monitor by pressing the key combination **<Fn>+<F7>**.

Selecting display modes

This model uses the Intel 855 GM Integrated Graphics video controller. You can select which display is used when the notebook is connected to an external device.

To connect an external display, proceed as follows:

- 1 Plug the supplied Ethernet/VGA adapter to the monitor connector of your computer.
- 2 Connect the external device to the monitor/VGA connector of the Ethernet/VGA adapter.
- 3 Press and hold the **<Fn>** key and press the **<F7>** key to change the destination.
The output destination changes every time you press the **<F7>** key while holding the **<Fn>** key.
The output destination options are listed below:
 - **LCD only:** Displays contents on your computer's LCD only.
 - **LCD only + MONITOR (VGA):** Displays contents simultaneously on your computer's LCD and the external display*.
 - **MONITOR (VGA):** Displays contents on the external display only*.
 - **Setup:** Displays the resolution setting window for the external display.
The image appears on the external display.

To set up the video controller options, proceed as follows:

- 1 Click **Start**, then **Control Panel**.
The **Control Panel** appears.
- 2 Double-click **Appearance and Themes**, and then select **Display**.
The **Display Properties** dialog box appears.
- 3 Click the **Settings** tab.
- 4 Click the **Advanced** button and choose the **Intel Extreme Graphics** tab.
Then choose the **Graphics Properties** icon.
- 5 Click the **Devices** tab.
Select the **Monitor**, **Notebook**, **Intel Dual Display Clone** or **Extended Desktop** icon.

6 Click **Apply** and then **OK**.

* The external destination is displayed only when an external display is connected to your computer.

 Selecting the external display may automatically change the resolution of your computer's LCD.

Using the Dual Display function

The dual display function allows you to distribute portions of your desktop across separate displays. For example, if you have an external monitor attached to the monitor connector, your LCD display and the monitor can function as a single desktop.

You can move the cursor from one display to the other. This allows you to drag objects, such as an open application window or a toolbar, from one display to the other.

This configuration of a single desktop distributed across separate displays, is referred to as a virtual desktop.

 Your monitor may not support the Dual Display function.

Certain software applications may not be compatible with Dual Display settings.

Make sure that your computer does not enter **Standby** or **Hibernate** mode while you are using Dual Display mode, otherwise your computer may not return to **Normal** mode.

If you set different colours on each display, do not divide one single window on two displays, otherwise your software may not work properly.

Set fewer colours or a lower resolution for each display.

Selecting the Dual Display mode

To select the Dual Display mode, proceed as follows:

- 1 Click the **Start** button on the **Windows** taskbar.
- 2 Click **Control Panel**.
- 3 Click **Appearance and Themes**.
- 4 Click the **Display** icon.
- 5 Select the **Settings** tab.
- 6 Click the display marked **2**.
- 7 Select the **Extend my Windows desktop onto this monitor** check box.
- 8 Click **Apply** and then **OK**.

 Your monitor may not support the Dual Display function.

Setting the colours and resolution for each display

You can set the display colours and resolution for each display that is part of a virtual desktop.

To set the display colours and resolution for each display, proceed as follows:

- 1 Click the **Start** button on the **Windows** taskbar.
- 2 Click **Control Panel**.
- 3 Click **Appearance and Themes**.
- 4 Click the **Display** icon.
- 5 Select the **Settings** tab.
- 6 Click the display you want to change (1 or 2): display colours or resolution.
- 7 Select an option from the **Color quality** list to change colours.

- 8 Use the slider in the **Screen resolution** to adjust the resolution.
- 9 Click **Apply** and then **OK**.

Customizing the virtual desktop

You can customize the Dual Display mode by changing the position of the two monitors comprising the virtual desktop.

To customize Dual Display mode, proceed as follows:

- 1 Click the **Start** button on the **Windows** taskbar.
- 2 Click **Control Panel**.
- 3 Click **Appearance and Themes**.
- 4 Click the **Display** icon.
- 5 Click the **Settings** tab.
- 6 Drag the monitor icons to match the physical arrangement of your monitors. The two monitor icons must be connected to create a virtual desktop.
- 7 Click **Apply** and then **OK**.

Deactivating the Dual Display function

To deactivate the Dual Display function, proceed as follows:

- 1 Click the **Start** button on the **Windows** taskbar.
- 2 Click **Control Panel**.
- 3 Click **Appearance and Themes**.
- 4 Click the **Display** icon.
- 5 Click the **Settings** tab.
- 6 Click the display 2.

7 Deselect the **Extend my Windows desktop onto this monitor** option.
This will disable the Dual Display.

 For switching from Primary to Secondary display, see the section **Selecting display modes** ([page 61](#)).

Connecting external speakers

You can enhance the sound quality of your computer by connecting external speakers.

To connect external speakers, proceed as follows:

- 1 Plug the speaker cable (1) into the headphone connector (2).
- 2 Plug the other end of the speaker cable into the external speaker (3).
- 3 Turn down the volume of the speakers before you turn them on.

 Make sure your speakers are designed for computer use.

Do not place floppy disks on the speakers; their magnetic field may damage the data on the disks.

Troubleshooting sound

My speakers are not producing sound

- If you use external speakers, check that the speakers are properly connected and the volume is turned up. If the speakers have a mute button, make sure it is off. If batteries power the speakers, check that the batteries are inserted properly and that they are charged.
- If you have connected an audio cable to the headphone connector, disconnect the cable.

Connecting a Universal Serial Bus (USB) device

You can connect a USB device (for example, a mouse, floppy disk drive, keyboard, printer) to your computer.

USB devices are hot plug and play devices. You do not need to shut down your computer prior to connecting these devices unless the manual supplied with the device states otherwise.

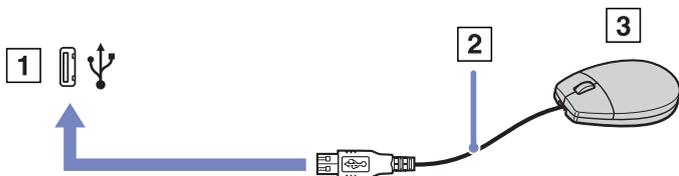

For some USB devices you need to install the software before you connect the device. Not following this procedure might cause the device not to work properly. For more information, check the manual provided with the USB device.

- ❑ **Connecting a USB mouse** [\(page 69\)](#)
- ❑ **Connecting a USB floppy disk drive** [\(page 70\)](#)

Connecting a USB mouse

To connect a USB mouse, proceed as follows:

- 1 Choose the USB connector (1) you prefer to use.
- 2 Plug the USB mouse cable (2) into the USB connector.
- 3 You can use your USB mouse (3).

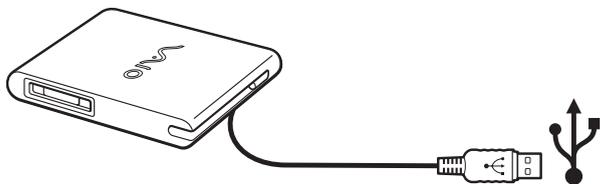

The VAIO USB mouse software driver is preinstalled on your computer, therefore, you only need to plug the USB mouse into the USB connector and you can start working.

Connecting a USB floppy disk drive

As an optional extra, you can purchase a USB floppy disk drive and connect it to your computer.

To connect a USB floppy disk drive, proceed as follows:

- 1 Choose the USB connector you prefer to use.
- 2 Plug the USB floppy disk drive cable into the USB connector. The VAIO logo on the disk drive should be facing up. Your USB floppy disk drive is now ready for use.

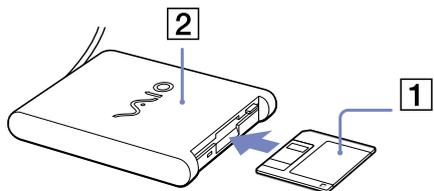

To remove a USB floppy disk drive, proceed as follows:

- ❑ If your computer is on, wait until the floppy drive LED indicator turns off and then unplug the USB cable. If the floppy disk drive is not removed properly, your system may crash and you may lose any unsaved data.
- ❑ If your computer is off, you can unplug the USB cable directly from the computer.

Inserting a floppy disk

To insert a floppy disk, proceed as follows:

- 1 Hold the disk (1) with the label side facing up.
- 2 Gently push the disk into the drive (2) until it clicks into place.

Removing a floppy disk

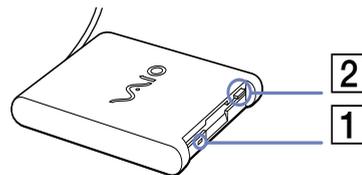

To remove a floppy disk, proceed as follows:

When you have finished using the floppy disk, wait until the LED indicator (1) turns off and then press the eject button (2) to remove the disk.

 Before pressing the eject button, make sure that the LED indicator is turned off.

If the disk does not come out by pressing the eject button, disconnect the floppy disk drive from the computer.

! Do not press the eject button while the LED indicator is on. It may damage the floppy disk.

Troubleshooting floppy disks

My USB floppy disk drive cannot write to a floppy disk

- The floppy disk is write-protected. Disable the write-protect feature or use a floppy disk that is not write-protected.
- Check that the disk is properly inserted into the floppy disk drive.
- Your disk may be corrupt. Try to insert another floppy disk.

The optional PCGA-UFD5/A (USB) floppy disk drive is not recognised as drive A

To set the UFD5/A to A, proceed as follows :

- 1 Turn the system power on.
- 2 Connect the UFD5/A.
- 3 Select **Control Panel** from the **Start** menu.
- 4 Double-click **System**.
- 5 Select the **Hardware** tab, then click **Device Manager**.
- 6 Select **Universal Serial Bus controllers**, then **Y-E Data USB Floppy**.
- 7 From the **Action** menu, click **Uninstall**.
- 8 Keep clicking **OK** until the **Confirmation of deletion of device** message appears.
- 9 Select **Scan for hardware changes** from the **Action** menu.
The UFD5/A is recognised as drive A.

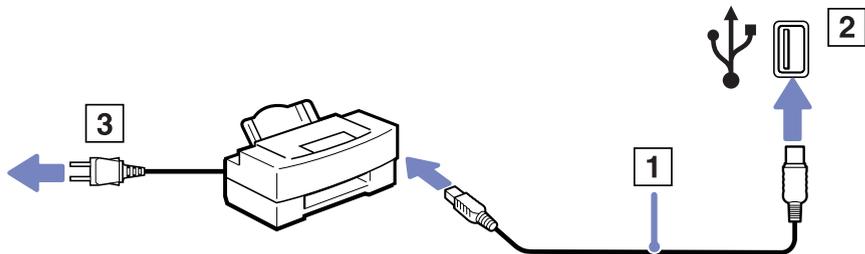

Connecting a printer

You can connect a Windows-compatible printer to your computer to print documents.

You can connect a USB printer compatible with your version of Windows to your computer.

To connect a printer using the USB connector, proceed as follows:

- 1 Plug a USB printer cable (1) into one of the USB connectors (2) on your computer. A USB connector is identified by the  symbol on your computer and printer.
- 2 Plug the printer power cord into an AC outlet (3).

Connecting an i.LINK device

Your computer includes an i.LINK (IEEE1394) connector, which you can use to connect to an i.LINK device such as a digital video camera recorder or to connect two VAIO notebooks in order to copy, delete or edit files.

The i.LINK connector of your computer does not supply power to external devices generally powered by i.LINK connectors.

The i.LINK connector supports transfer rates up to 400 Mbps; however, the actual transfer rate depends on the transfer rate of the external device.

The i.LINK features available may vary depending on the software applications you use. Refer to the documentation that came with your software for more information.

i.LINK cables compatible with your VAIO computer include cables with the following part numbers:

VMC-IL4415A (a 1.5 meter cable with a 4-pin connector at each end), VMC-IL4408Series (a 0.8 meter cable with a 4-pin connector at each end).

- ❑ **Connecting a digital video camera recorder (page 75)**
- ❑ **Connecting two VAIO notebooks (page 75)**

 An i.LINK connection with other compatible devices is not fully guaranteed.

The i.LINK connection varies depending on the software applications, operating system and i.LINK compatible devices you use. Refer to the documentation that came with your software for more information.

Check the working conditions and OS compatibility of i.LINK-compatible PC peripherals (HDD, CD-RW drive etc.) before you connect them to your computer.

Connecting a digital video camera recorder

To connect a digital video camera recorder, proceed as follows:

- 1 Plug one end of the i.LINK cable (1) into the i.LINK connector (2) of the computer and the other end into the DV Out connector (3) on the digital video camera recorder.
- 2 Launch the **DVgate Plus** application.

 On Sony digital video cameras, connectors labelled **DV Out**, **DV In/Out** or **i.LINK** are i.LINK-compatible.

The Sony digital video camera recorder is an example; your digital video camera recorder may need to be connected differently.

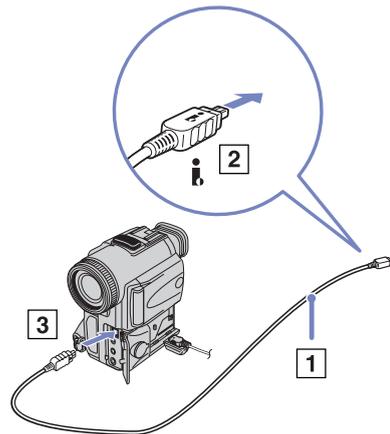

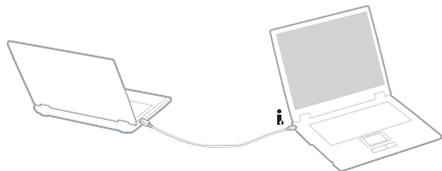

If your digital video camera recorder includes a Memory Stick slot, you can copy images from it to your computer via a Memory Stick. To do so, simply copy images on the Memory Stick, then use a special PC Card adapter to insert it into your computer.

You cannot access the pictures stored on a Memory Stick when using an i.LINK connection.

Connecting two VAIO notebooks

You can copy, edit or delete files on another VAIO computer to your computer with an optional i.LINK cable.

You can also print a document on a printer connected to another VAIO computer.

Troubleshooting i.LINK devices

I cannot establish an i.LINK connection between two VAIO computers

- You must have administrator rights on your computer to be able to link the two.
- Disconnect then reconnect the i.LINK cable.
- If you still have no connection after waiting for a while, restart both computers.
- If either computer has just returned from a power saving mode, the connection may be affected. In this case, make sure you perform a full restart before connecting them.
- Check that both units are in the same workgroup, and that the **Sharing** option is enabled.
- If the second computer has a different operating system (for example, Windows 2000), you need a software application such as Smart Connect.

*When I record images to a digital video device using **DVgate Plus**, I see an error message*

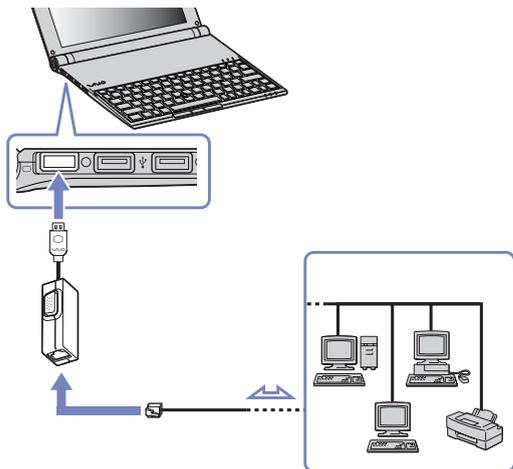

- Close all open applications and restart your computer. Frequent recording of images to a digital video device while using **DVgate Plus** sometimes causes this error.
- Your DV device will need to have DV In/Out in order to be able to transfer your files to the DV device.

I cannot use digital devices

- Check that the DV device is turned on and that the cables are properly connected.
- If you are using multiple i.LINK devices, the combination of the connected devices may cause unstable operation. If this is the case, turn off all connected devices and disconnect unused devices. Check the connection and then turn on the power again.
- You are strongly advised to use only Sony i.LINK cables, as using other brands may cause problems with the i.LINK devices.
- If **VAIO Power Management scheme** is selected when running on batteries, the i.LINK port is automatically disabled. In order to enable i.LINK port, use the power supply or select another scheme.

Connecting to a network (LAN)

You can connect your computer to 10BASE-T/100BASE-TX-type networks via an Ethernet network cable. For the detailed settings and devices needed to connect to the network, consult your Network Administrator.

 The default settings make your computer able to connect to the network.

For more information about connecting your computer to the network, please consult the Hardware troubleshooting section of the VAIO-Link website.

Getting help

This section describes how to get help and support if something goes wrong with your computer. Sony offers you many support options for your computer.

Sony support options

Please see the section **Documentation pack (page 10)** for details on the printed and online documentation delivered with your computer, as well as further sources of reference.

Other sources of information

- Go to the **online help files** that accompany your software for instructions on using the software.
- VAIO-Link website:** if you have any problem with your computer, you can access the VAIO-Link website for troubleshooting. Go to: <http://www.vaio-link.com>
- e-Support:** This interactive part of our website <http://www.vaio-link.com> allows you to get in contact with our dedicated support team over the internet. Using a personalised account, you can log your technical queries with ease.
- VAIO-Link help lines:** Before contacting VAIO-Link by telephone, try to solve the problem by reading the online and printed documentation.
- Visit the other Sony websites:
 - www.club-vaio.com if you want to know more about VAIO and become part of the growing VAIO community.
 - www.sonystyle-europe.com for online purchases.
 - www.sony.net for other Sony products.

You need to set up an Internet connection before you can access the online features described here.

e-Support

What is e-Support?

You have searched our user guides and website (www.vaio-link.com) but have not found an answer to your question/issue? e-Support is the ideal solution for you!

Our e-Support Web Portal is an interactive website on which you can submit any technical query you may have regarding your VAIO and receive answers from our dedicated support team.

Every submitted query will result in a unique 'case number' to ensure smooth communication between yourself and the e-Support Team.

Who can use e-Support?

All registered VAIO customers are entitled to unlimited access to the VAIO-Link e-Support Web Portal.

How can I access the e-Support portal?

When you register your VAIO computer online at Club-VAIO (www.club-vaio.com), you will automatically receive an email with the link to the e-Support Web Portal, your Customer ID and some basic explanation a few hours later.

All you need to do is activate your account by clicking on the provided link in the email.

You are now ready to create your first case!

You can access the e-Support Web Portal from any computer with an active Internet connection.

A complete help file is available on the e-Support Web Portal to help you use our e-Support Service.

Can I submit questions in my native language?

Since you are interacting with our e-Support Team through a portal, which connects you directly to our central database, e-Support will only accept and deal with queries submitted in English.

Can I submit my questions at any time?

Yes, you can submit your questions 24/7, but please keep in mind that our e-Support Team can only treat your queries from Monday till Friday between 8am and 6pm.

Is there a cost involved for using e-Support?

No, this is a complete free of charge service offered to all registered VAIO customers!

How do I know when the e-Support Team has handled my query/case?

As soon as your case has been dealt with by our e-Support Team, you will receive an email, notifying you that your case has been updated.

Precautions

This section describes safety guidelines and precautions to help you protect your computer from potential damage. Please contact VAIO-Link if you need assistance.

- ❑ **On handling the hard disk** ([page 82](#))
- ❑ **On handling the LCD screen** ([page 82](#))
- ❑ **On using the power source** ([page 83](#))
- ❑ **On handling your computer** ([page 84](#))
- ❑ **On handling floppy disks** ([page 86](#))
- ❑ **On handling discs** ([page 86](#))
- ❑ **On using the battery pack** ([page 87](#))
- ❑ **On using headphones** ([page 88](#))
- ❑ **On handling Memory Sticks** ([page 88](#))

On handling the hard disk

The hard disk has a high storage density and reads or writes data in a short time. However, it can be easily damaged by mechanical vibration, shock or dust.

Although the hard disk has the internal safety device to prevent losing data due to mechanical vibration, shock or dust, you should be careful when handling your computer.

To avoid damaging your hard disk:

- Do not subject your computer to sudden movements.
- Keep the computer away from magnets.
- Do not place your computer in a location subject to mechanical vibration or in an unstable position.
- Do not move your computer while the power is on.
- Do not turn off the power or restart the computer while reading or writing data to disk.
- Do not use your computer in a place subject to extreme changes in temperature.
- Do not move your computer while the system is in **Standby** mode.

 If the hard disk is damaged, the data cannot be restored.

On handling the LCD screen

- Do not leave the LCD facing the sun as it can damage the LCD. Be careful when using the computer near a window.
- Do not scratch the LCD or exert pressure on it. This could cause malfunction.
- Using the computer in low temperature conditions may produce a residual image on the screen. This is not a malfunction. When the computer returns to normal temperature, the screen returns to normal.
- A residual image may appear on the screen if the same image is displayed for a lengthy period of time. The residual image disappears in a while. You can use a screensaver to prevent residual images.
- The screen becomes warm during operation. This is normal and does not indicate a malfunction.

- ❑ The LCD is manufactured using high-precision technology. You may, however, see tiny black points and/or bright points (red, blue, or green) that continuously appear on the LCD. This is a normal result of the manufacturing process and does not indicate a malfunction.
- ❑ Avoid rubbing the LCD screen, as this can damage the screen. Use a soft, dry cloth to wipe the LCD screen.

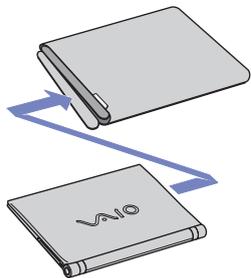

On using the power source

- ❑ See the printed **Specifications** sheet to check the power operation of your VAIO.
- ❑ Do not share the AC outlet with other power-consuming equipment, such as a photocopier or shredder.
- ❑ You can purchase a power strip with a surge protector. This device prevents damage to your computer caused by sudden power surges, in an electrical storm, for example.
- ❑ Do not place heavy objects on the power cord.
- ❑ To disconnect the cord, pull it out by the plug. Never pull the cord itself.
- ❑ Unplug your computer from the wall outlet if you are planning to not use the computer for a long time.
- ❑ Make sure that the socket outlet is easily accessible.
- ❑ When the AC adapter is not used, unplug it from the AC outlet.
- ❑ Use only the supplied AC adapter. Do not use any other AC adapter.

On handling your computer

- ❑ Clean the cabinet with a soft cloth (supplied with your computer), which is either dry or lightly moistened with a mild detergent solution. Do not use any type of abrasive pad, scouring powder, or solvent such as alcohol or benzene, as these may damage the finish of your computer.
- ❑ Should you drop a solid object or any liquid onto the computer, shut down your computer and then unplug it. You may want to have the computer checked by qualified personnel before operating it again.
- ❑ Do not drop the computer or place heavy objects on top of the computer.
- ❑ Do not place your computer in a location subject to:
 - ❑ Heat sources, such as radiators or air ducts,
 - ❑ Direct sunlight,
 - ❑ Excessive dust,
 - ❑ Moisture or rain,
 - ❑ Mechanical vibration or shock,
 - ❑ Strong magnets or speakers that are not magnetically shielded,
 - ❑ Ambient temperature of more than 35°C or less than 5°C,
 - ❑ High humidity.
- ❑ Do not place electronic equipment near your computer. The electromagnetic field of your computer may cause a malfunction.
- ❑ Provide adequate air circulation to prevent internal heat from building up. Do not place your computer on porous surfaces such as rugs or blankets, or near material such as curtains or draperies that may block its ventilation slots.
- ❑ The computer uses high-frequency radio signals and may cause interference to radio or TV reception. Should this occur, relocate the computer a suitable distance away from the set.
- ❑ Use only specified peripheral equipment and interface cables; otherwise, problems may occur.

- ❑ Do not use cut or damaged connection cables.
- ❑ If the computer is brought directly from a cold location to a warm one, moisture may condense inside your computer. In this case, allow at least one hour before turning on your computer. If any problems occur, unplug your computer and contact VAIO-Link.
- ❑ Make sure you disconnect the power cord before cleaning the computer.
- ❑ As you may lose important data once your computer is damaged, you should back up your data regularly. You can restore most of the original application programs from the supplied disc (read the **Troubleshooting Guide** for details).
- ❑ After using your computer, put your computer in the supplied carrying pouch. This protects the surface of your computer and avoids having too many stains.

On handling floppy disks

- Do not open the shutter manually or touch the surface of the floppy disk.
- Keep floppy disks away from magnets.
- Keep floppy disks away from direct sunlight and other sources of heat.

On handling discs

- Do not touch the surface of the disc.
- Do not drop or bend the disc.
- Fingerprints and dust on the surface of a disc may cause read errors. Always hold the disc by its edges and central hole, as shown:

- Proper care of the disc is essential to its continuous reliability. Do not use solvents such as benzine, thinning agents, commercially available cleaners or anti-static spray, as they may cause damage to the disc.
- For normal cleaning, hold the disc by its edge and use a soft cloth to wipe the surface from the centre out.
- If the disc is badly soiled, moisten a soft cloth with water, wring it out well, and use it to wipe the surface of the disc from the centre out. Wipe off any remaining moisture with a dry soft cloth.
- Never put stickers on discs. This will affect the use of the disc irreparably.

On using the battery pack

- ❑ Never leave the battery pack in temperatures above 60°C, such as in a car parked in the sun or under direct sunlight.
- ❑ Battery life is shorter in a cold environment. This is due to decreased battery efficiency at low temperatures.
- ❑ Charge the batteries at temperatures between 10°C to 30°C. Lower temperatures require a longer charging time.
- ❑ While the battery is in use or being discharged, the battery pack heats up. This is normal and is not cause for concern.
- ❑ Keep the battery pack away from all sources of heat.
- ❑ Keep the battery pack dry.
- ❑ Do not open or try to disassemble the battery pack.
- ❑ Do not expose the battery pack to any mechanical shock.
- ❑ If you are not using the computer for an extended period of time, remove the battery pack from the computer to prevent damage to the battery.
- ❑ If, after fully charging the battery pack, the battery power is still low, the battery pack may be reaching the end of its life and should be replaced.
- ❑ You do not need to discharge the battery before recharging.
- ❑ If you have not used the battery pack for a considerable amount of time, recharge the battery.

On using headphones

- ❑ **Road safety** – Do not use headphones while driving, cycling, or operating any motorized vehicle. It may create a traffic hazard and is illegal in some areas. It can also be potentially dangerous to play loud music while walking, especially at pedestrian crossings.
- ❑ **Preventing hearing damage** – Avoid using headphones at high volume. Hearing experts advise against continuous, loud and extended play. If you experience a ringing in your ears, reduce the volume or discontinue use.

On handling Memory Sticks

- ❑ Do not touch the Memory Stick connector with your finger or metallic objects.
- ❑ Use only the label supplied with the Memory Stick as a label.
- ❑ Do not bend, drop, or apply strong shock to the Memory Stick.
- ❑ Do not disassemble or modify Memory Sticks.
- ❑ Do not let Memory Sticks get wet.
- ❑ Do not use or store Memory Sticks in a location subject to:
 - ❑ Extremely high temperatures, such as in a car parked in the sun,
 - ❑ Direct sunlight,
 - ❑ High humidity or,
 - ❑ Corrosive substances.
- ❑ Use the storage case supplied with the Memory Stick.
